

## Testimonial for Cute Infocomm Solutions Pte Ltd

We, (Dyna-Mac Engineering Services Pte Ltd) have collaborated with CuteInfocomm for the digitalization of our work process by customizing their basic CuteQM software. The objective was to have a centralized platform to manage all quality related inspections and relevant documentation for better efficiency, accuracy and reliability.

Cute Infocomm deployed a competent team to understand our workflow and requirements for customization and delivered the CuteQM application which was in-line with our expectation.

Below are the key factors and benefits which made CuteQM application a preferred solution for us

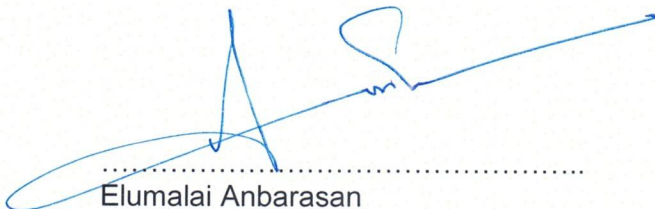

1. No user based license or tokens restriction, which incurs huge running cost. Unlimited user access feature in CuteQM gives lot of flexibility and scalability without commercial impact.
2. Covers all areas, from WPS/PQR, Welder Qualification, material Inspection, Fit-up, visual, NDT control, weld statistics, completion status, tracking of spools through various stages from spool fabrication to erection and testing of spools in the module.
3. e-approval of all inspection and reports which saves unproductive time spent in manual approval.
4. Paperless electronic documentation which saves huge volume of paper and storage space
5. One click final e-documentation which has minimized our final document preparation time.

Based on the benefits we have experienced with the implementation of CuteQM application, we are confident that it can make a difference to any similar player in the sector.

We take this opportunity to thank Cute Infocomm for their professionalism and flexibility in understanding our problems and accommodating last minute changes requested, which was key for the successful completion of this project.

Our best wishes to Cute Infocomm for great success, with a quest for continual upgrading of the application...

Thank you

Elumalai Anbarasan  
General Manager (QA/QC)
